Perlick Showcases Industry-Leading Precision Wine Refrigeration at KBIS 2019

Manufacturer's extensive line of luxury wine reserves offers exclusive features in models ranging from undercounter to full-size column units

MILWAUKEE (Feb. 27, 2019) – For wine connoisseurs who want to preserve their prized collections like the pros, [Perlick](#) offers a full line of commercial-grade, luxury reserves for home use. In fact, the company's residential line features the same proven technology it spent a century designing, engineering and manufacturing for fine bars, restaurants and large venues around the world. Perlick showcased its industry-leading wine preservation at the Kitchen & Bath Industry Show 2019, held Feb. 19-21 in Las Vegas.

The manufacturer's expansive line of wine reserves offers unprecedented temperature and intuitive humidity control, as well as carbon air filtration that maintains optimal air quality by absorbing damaging odors. Innovative technology monitors humidity levels in the reserve, and if necessary, pushes additional moisture into the storage compartment to maintain 60-70 percent humidity, which preserves corks and prevents oxidation. This, along with its precision temperature system that maintains temperature within 1°F of set point, ensures ideal conditions for proper maturation.

"Perlick is proud to offer homeowners the same wine preservation technology that has been used by leaders in the high-end hospitality industry for years," said Stephanie Muraro-Gust, Perlick's product marketing manager. "Consumers can enjoy luxury, residential units that not only look beautiful enough to be used in front-of-house service at fine restaurants, but that also meet the high performance standards of commercial applications."

More...

From compact, undercounter models like the industry-exclusive [Sottile Wine Reserve](#) with 18-inch shallow-depth design, to full-size columns like the 24-inch-wide, 84-inch-tall [single-](#) and [dual-zone](#) wine reserves, Perlick offers a wide range of both indoor and outdoor units. With storage for 20 - 94 bottles and customizable options, the reserves can accommodate nearly any collection size or design challenge. Perlick's dual-zone wine units enable users to store red and white wine in the same reserve with two independently controlled temperature zones.

Perlick's award-winning column wine reserves also feature triple-pane, bronze-tinted glass that is LowE- and argon-filled, protecting treasured bottles from light exposure, which can cause oxidation in wine and degrade it over time. The column reserves are programmed through the intuitive PerllQ™ touch-screen control panel with a sleek, black design that disappears into the backdrop until it's awoken with a touch. Every Perlick column and undercounter unit is constructed of commercial-grade stainless steel inside and out for maximum durability and restaurant-standard cleanliness.
