Perlick's Front-Loading Faucet Simplifies Installation

Milwaukee—[Perlick](#), a leader in total bar package equipment and beverage dispensing systems, introduces easy-to-install 934GN-LF [front-loading faucets](#) that help save money on installation and maintenance. Perlick's faucets are installed and adjusted from the front, not from underneath, so less time is needed to work with the equipment.

Lead-free faucets come with 18-inch braided stainless steel water supply lines and built-in check valves to prevent back-up or cross flow. Available spouts are 6", 10" or double-joint straight spouts, or a goose-neck spout. The front-loading faucets are compatible with Perlick's TS series hand and multi-tank sinks. Ease of operation is also enhanced through optional equipment: foot-operated pedals for hot and cold water, and wrist-blade handles on the faucet.

The faucets are part of Perlick's [Top Shelf Line of Stainless Steel Underbar Equipment](#) combining precision design with stock equipment. The result is efficient beverage environments that meet the needs of individual users. The line is affordable and enables beverage and foodservice professionals to build unique set-ups with solid, finely crafted equipment.
